

Relief, direct acting guided poppet type

Common cavity, Size 10

VMD1.040

OT.M1.03 - X - 99 - Z

Description

Flow is blocked from 1 to 2 until pressure increases to meet the selected valve setting, lifting the poppet from its seat and allowing relief flow through port 2 to tank. Pressure at port 2 is additive to the relief setting of the valve. The unique Bosch Rexroth Oil Control poppet design provides enhanced stability at all flows and pressures.
