Universal Parking Support for Multifaster series

Faster is glad to introduce in the products range a new accessory for Multifaster series: the universal parking support "S PU".

Basically, the original idea was to design and produce something very smart and simple, universal, able to safely keep parked the Multifaster mobile half when disconnected, suitable in the same time for the most part of Multifaster models.

The resulting product is shown in the pictures below with two examples: on the left we have the support "S PU" with a 2P508 mobile half parked on it, on the right the same support with a Multifaster 2P608 series.

Of course, depending on the specific Multifaster model, the interaxis between the two brackets (Left and Right) is different and will be specified in the proper instructions to proceed with installation: this is very easy as it is sufficient to make four holes suitable for M6 screws properly aligned.

In order to receive more information about this and other new products, please do not hesitate to contact Faster sales department.
